Giant Darwin Tulips for Fall Planting . . . 1933

Vivid Gorgeous Colors :: Regal Beauty

The Queen of All Tulips. Too much cannot be said in favor of the Darwins for outdoor culture. The remarkably brilliant coloring and splendid substance of the globular or cup-shaped flowers, their large size, with long, strong stems of 20 to 30 inches, also robust growth, make them unsurpassed for May blossoms. Usually in bloom by Mother's Day (second Sunday in May). They remain quite perfect a long time after being cut. They can be forced easily for March blossoming. The popularity of the Darwins is simply phenomenal. You should plant liberally of them. For greatest satisfaction we recommend planting named varieties only. The apricot, bronze and copper shades are secured in the Breeders, listed on next page.

PRICES: Unless otherwise stated, all prices are **POSTPAID**. Six of a kind of **BULBS** at the dozen rate; 25 of a kind at the 100 rate. Less than one-half dozen of a kind of **BULBS** sold at rate of one-tenth of the dozen price.

Old Dutch Garden Tulips

Called Breeder Tulips—Darwin Class

These late-blooming Tulips are among the very popular outdoor bloomers, coming in with the Darwins. They are of a peculiar type, and are exceptionally strong and sturdy. In growth and shape, they are much like Darwins. There are no plain bright or lively colors in them, such as secured in the Darwins, but there are some extraordinary bronze, coffee-brown, velvet and golden yellow edged blooms among them. This type supplies the yellow, apricot, bronze and copper shades missing in the Darwins, also other distinct shades. The colors of bronze, brown, buff, and dark shades prevail. The flowers are extra large and sturdy, on long stems.

Carefully taken up with a ball of native soil wrapped around the roots. Give abundance of moisture throughout first winter.
